IN THE CLAIMS

Amendments To The Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A composite display unit having a first display element and a second display element that is provided overlapping the first display element, wherein the first display element comprises:

a liquid crystal panel in which a liquid crystal layer is held between first and second transparent substrates; and

a reflective polarization plate that transmits light that oscillates in a specified direction and reflects light that oscillates in a direction that is intersecting with the specified direction, the reflective polarization plate being directly joined to the first transparent substrate;

wherein the second display element comprises a liquid crystal panel in which a liquid crystal layer is held between third and fourth transparent substrates; and

wherein the second transparent substrate is directly joined to the third transparent substrate of the second display element; and

wherein the reflective polarization plate is constituted as a dielectric multi-layered film with birefringence.

2. (Original) The composite display unit according to claim 1, wherein the reflective polarization plate is constituted as a dielectric multi-layered film comprises two macromolecular layers with different light elastic moduli with birefringence.

3. (Previously Presented) The composite display unit according to claim 1, wherein a polarization plate is further provided on the side of the fourth transparent substrate.

Application Serial No: 10/528754

Responsive to the Office Action mailed on: June 28, 2007

4. (Original) The composite display unit according to claim 3, wherein the polarization plate provided on the side of the fourth transparent substrate is a reflective polarization plate or an absorption polarization plate.
5. (Original) The composite display unit according to claim 1, wherein the first display element performs a dot-matrix display and the second display element performs a segment display.
6. (Cancelled)
7. (Previously Presented) An electrical device in which the composite display unit according to claim 1 is mounted.
